1. Created and configured a public GitHub repository

1 General

Owner *

htribbett123-ctrl /

Repository name *

itexpshw1

itexpshw1 is available.

Great repository names are short and memorable. How about super-engine?

Description

wk2 home

8 / 350 characters

2 Configuration

Choose visibility *
Choose who can see and commit to this repository

Public

Start with a template
Templates pre-configure your repository with files.

No template

Add README
READMEs can be used as longer descriptions. About READMEs

On

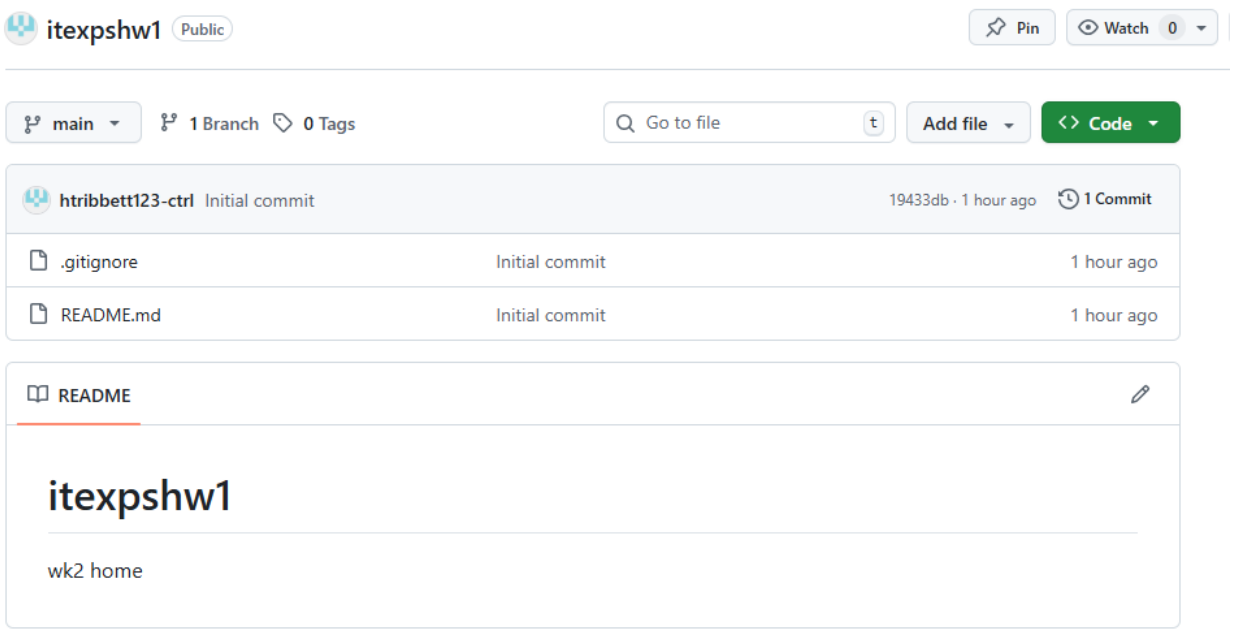
Add .gitignore
.gitignore tells git which files not to track. About ignoring files

Python

Add license
Licenses explain how others can use your code. About licenses

No license

Create repository



2. Cloned remote repository to local development environment.

```
htrib@MetricMind MINGW64 /
$ git clone https://github.com/htribbett123-ctrl/itexpshw1.git
fatal: could not create work tree dir 'itexpshw1': Permission denied
```

Resolved directory permission issue by navigating to appropriate working directory.

My access is being denied because I am in my root (/) and in Git Bash it is not writable

```
htrib@MetricMind MINGW64 /
$ pwd
/
```

So I have to run tis command to solve this problem

cd ~ takes me right to my home directory

```
htrib@MetricMind MINGW64 /
$ cd ~

htrib@MetricMind MINGW64 ~
$ git clone https://github.com/htribbett123-ctrl/itexpshw1.git
Cloning into 'itexpshw1'...
remote: Enumerating objects: 4, done.
remote: Counting objects: 100% (4/4), done.
remote: Compressing objects: 100% (3/3), done.
remote: Total 4 (delta 0), reused 0 (delta 0), pack-reused 0 (from 0)
Receiving objects: 100% (4/4), done.
```

Run pwd:

Am in my home folder/directory

```
htrib@MetricMind MINGW64 ~
$ pwd
/c/Users/htrib
```

Now I move inside folder:

```
htrib@MetricMind MINGW64 ~
$ cd itexpshw1

htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$
```

3. Add two text files (1.txt, 2.txt) each having 2 lines for text

File 1.txt

```
htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ echo "this is my fist lab" > 1.txt

htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ cat 1.txt
this is my fist lab

htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ echo "second line" >> 1.txt

htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ cat 1.txt
this is my fist lab
second line
```

File 2.txt

```
htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ echo "this is the second file" > 2.txt

htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ cat 2.txt
this is the second file

htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ echo "this is for the second file" >> 2.txt

htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ cat 2.txt
this is the second file
this is for the second file
```

Now I will add:

File has not been staged yet

```
htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ git status
On branch main
Your branch is up to date with 'origin/main'.

Untracked files:
  (use "git add <file>..." to include in what will be committed)
        1.txt
        2.txt

nothing added to commit but untracked files present (use "git add" to track)
```

Used git add . to add all files

```
htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ git add .
warning: in the working copy of '1.txt', LF will be replaced by CRLF the next t
me Git touches it
warning: in the working copy of '2.txt', LF will be replaced by CRLF the next t
me Git touches it

htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ git status
On branch main
Your branch is up to date with 'origin/main'.

Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
        new file:   1.txt
        new file:   2.txt
```

4. Commit the changes to your local repository with message "Initial Structure"

When I commit it commit the file that I have staged

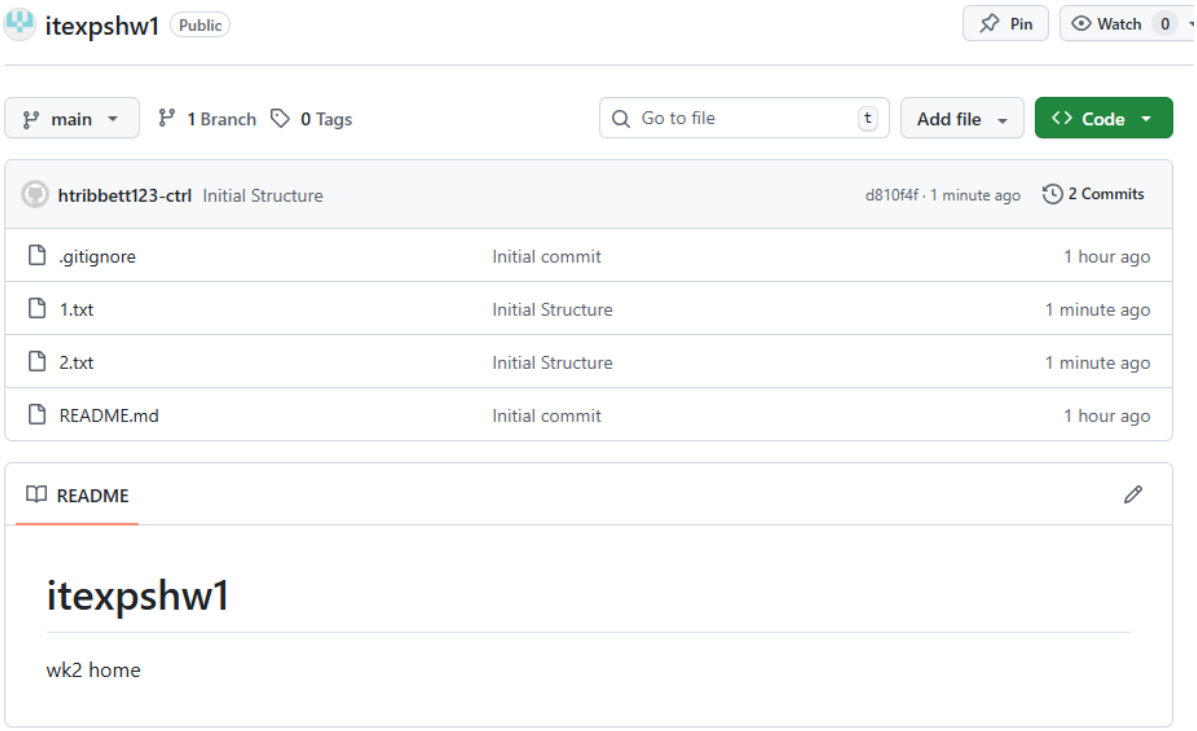
```
htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ git commit -m "Initial Structure"
[main d810f4f] Initial Structure
 2 files changed, 4 insertions(+)
 create mode 100644 1.txt
 create mode 100644 2.txt
```

Pushed updates to remote repository.

5. Push the file to remote repository on github

```
htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ git push
Enumerating objects: 5, done.
Counting objects: 100% (5/5), done.
Delta compression using up to 8 threads
Compressing objects: 100% (3/3), done.
Writing objects: 100% (4/4), 404 bytes | 404.00 KiB/s, done.
Total 4 (delta 0), reused 0 (delta 0), pack-reused 0 (from 0)
To https://github.com/htribbett123-ctrl/itexpshw1.git
   19433db..d810f4f  main -> main
```

Changes have been pushed to repo:



Implemented feature branching workflow (main + feature branch).

Create a local branch with name f1

Am in main branch

```
   19433db..d810f4f  main -> main

htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ git branch
* main
```

Created branch and 7. switch local repository to new branch

```
htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ git checkout -b f1
Switched to a new branch 'f1'

htrib@MetricMind MINGW64 ~/itexpshw1 (f1)
$ git branch
* f1
  main
```

8. Add a new file 3.txt with two lines of text to the branch

Created file and checking branch

```
htrib@MetricMind MINGW64 ~/itexpshw1 (f1)
$ echo "this is for file 3" > 3.txt

htrib@MetricMind MINGW64 ~/itexpshw1 (f1)
$ git status
On branch f1
Untracked files:
  (use "git add <file>..." to include in what will be committed)
        3.txt

nothing added to commit but untracked files present (use "git add" to track)
```

```
$ echo "Extra credit lab" >> 3.txt

htrib@MetricMind MINGW64 ~/itexpshw1 (f1)
$ git status
On branch f1
Untracked files:
  (use "git add <file>..." to include in what will be committed)
        3.txt

nothing added to commit but untracked files present (use "git add" to track)
```

3.txt is now staged

```
htrib@MetricMind MINGW64 ~/itexpshw1 (f1)
$ git add 3.txt
warning: in the working copy of '3.txt', LF will be replaced by CRLF the next
me Git touches it

htrib@MetricMind MINGW64 ~/itexpshw1 (f1)
$ git status
On branch f1
Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
        new file:   3.txt
```

```
htrib@MetricMind MINGW64 ~/itexpshw1 (f1)
$ cat 3.txt
this is for file 3
Extra credit lab
```

Now we commit:

```
Extra credit Tab

htrib@MetricMind MINGW64 ~/itexpshw1 (f1)
$ git commit -m "This is for extra credit"
[f1 bf53f1e] This is for extra credit
 1 file changed, 2 insertions(+)
 create mode 100644 3.txt
```

Now we switch to main branch to push.

We have to be in main branch because that is the branch that will receive the changes

```
htrib@MetricMind MINGW64 ~/itexpshw1 (f1)
$ git checkout main
Switched to branch 'main'
Your branch is up to date with 'origin/main'.

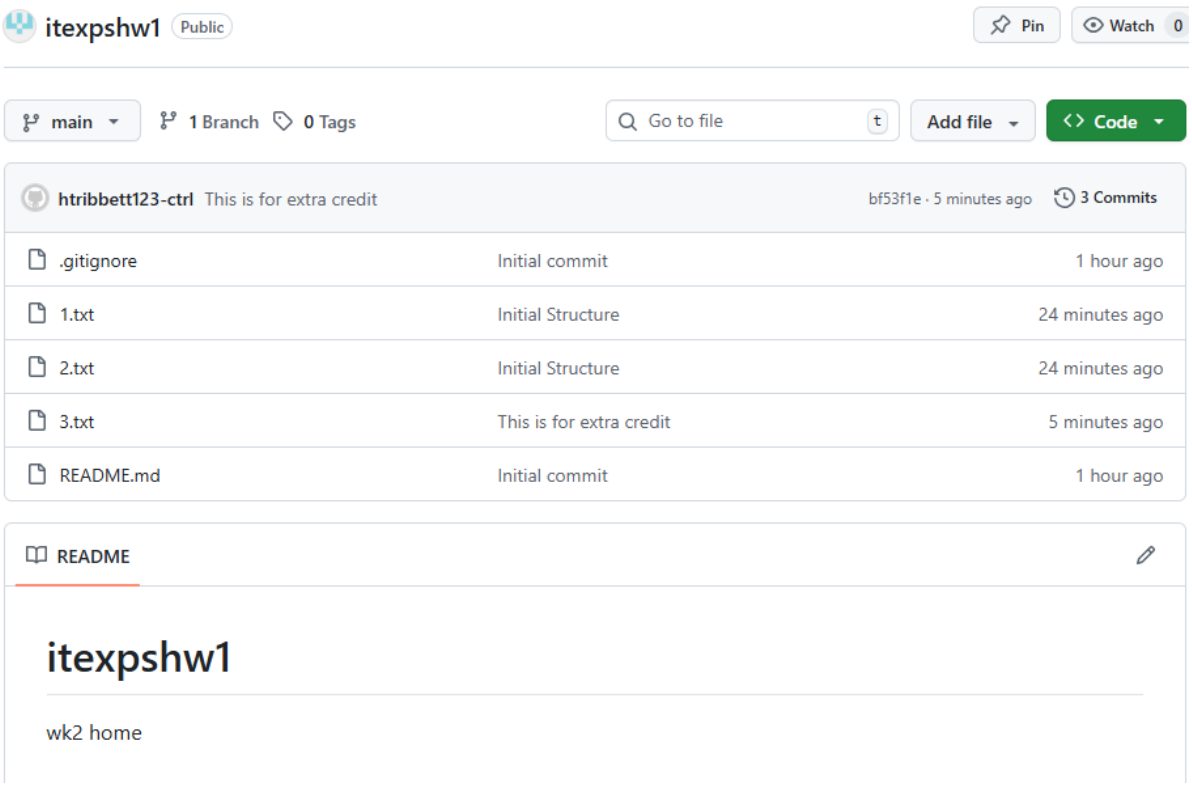
htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ git push
Everything up-to-date
```

Merged feature branch into main using Git merge.

now I merged f1

```
htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ git merge f1
Updating d810f4f..bf53f1e
Fast-forward
 3.txt | 2 ++
 1 file changed, 2 insertions(+)
 create mode 100644 3.txt
```

Now we push:

```
htrib@MetricMind MINGW64 ~/itexpshw1 (main)
$ git push
Enumerating objects: 4, done.
Counting objects: 100% (4/4), done.
Delta compression using up to 8 threads
Compressing objects: 100% (2/2), done.
Writing objects: 100% (3/3), 307 bytes | 307.00 KiB/s, done.
Total 3 (delta 1), reused 0 (delta 0), pack-reused 0 (from 0)
remote: Resolving deltas: 100% (1/1), completed with 1 local object.
To https://github.com/htribbett123-ctrl/itexpshw1.git
   d810f4f..bf53f1e  main -> main
```


3.txt Added to repo
